Birth date: 06 de enero de 1991, Barranquilla

PROFILE

Senior - Full Stack Developer, Systems Engineer with competences in software development, ability to work in a team, easy adaptation to the projects and work mechanics of the group, great capacity for self-learning and research with basic, medium and advanced knowledge in JAVA EE, PHP, CSS3, HTML5, GIT, JavaScript and TypeScript.

Understanding and Implementation of Frameworks such as Angular 2+, Laravel, Spring Boot, managing operations on the database with ORM mapping through Hibernate. Creation of web applications from scratch using these Frameworks or making simple developments with basic elements. Application of design patterns such as MVC and Singleton among others. Definition through code with database integration to control the level of user access to application resources using the JAAS design pattern (applied in PHP + MariaDB).

Structuring of projects in angular 2+, defining and developing the entire architecture of the same by creating modules, components, pages, directives, pipes, interceptors, sass, services, authentication guards for access controls to resources and pages, environment variables, validations custom forms, session persistence, thus achieving a complete separation between the frontend and the backend.

Frontend structuring and layout of the site from scratch, CSS3 without or with SASS including custom functions (preferably with SASS), Responsive Web Design layout without previous design, managing to develop the site in more than 95% faithful to the original design previously indicated.

Backend development of all the functionalities that the site or application demands, either creating functions or creating and consuming restful services or using libraries.

Ability to continue previously started projects, adding new functionalities to sites and mobile applications developed in JAVA, PHP. Analysis, design, maintenance and migration of relational databases such as MYSQL / MariaDB and non-relational SQLite.

Handling of Message Broker RabbitMQ for processing asynchronous tasks. Creation and maintenance of chatbot implemented in Telegram and connected to a database. Creation of custom scripts for the automation of tasks such as sql statement generators based on csv files or information extractors from HTML pages.

Techs	Java EE 8+, PHP, Python, JavaScript, TypeScript, HTML5, CSS3,
Tools	VIM, Git, SASS, RabbitMQ, Postman
Frameworks / Libraries	Angular 2+, Spring Boot, Laravel, CakePHP, Codeigniter, Django, Ionic 1, Jquery, Foundation, Node JS, Electron JS, Angular JS
DB	MySQL, MariaDB, PostgreSQL, Oracle, SQLLite

Brands worked: Rakel, Diversidad Rural, Enel Codensa, Samsung, Cheil, Colpatria, Red Bull, Jägermeister, Makro Colombia, CasaLuker, Asociación Nacional de Porcicultores, The North Face, Terpel, AUNAP.

EXPERIENCE

Ariane S.A.S.

Senior Development Engineer

2018/07/03 – 2020/02/29

Full Stack Frontend + Backend software developer, using frameworks such as Angular 7+, Spring Boot under the Java 8 language, JavaScript, CSS3 with SASS, HTML5, TypeScript, developing medium and high complexity logical functions with connection to PostgreSQL database.

Definition and development of Frontend architecture in Angular 7+, creating all types of required elements such as modules, components, pages, directives, pipes, interceptors, sass, services, authentication guards for access controls, custom forms validations, persistence session. Development of restful services with Spring Boot and handling of asynchronous tasks with message broker rabbitmq.

Brands worked: Rakel.

Boss: Carlos Arturo Gutiérrez Ospina

Phone: 311 5300278

Cheil

Junior Development Engineer

2018/08/19 – 2018/06/28

Backend + Frontend software developer, using frameworks such as Angular 6+, Laravel under the PHP language, JavaScript, CSS3 with SASS, HTML5, TypeScript, developing medium and high complexity logical functions with connection to MYSQL database. In addition to the various developments, there are also code and database level migrations, CMS creation from scratch for applications.

Brands worked: Samsung, Cheil.

Boss: Hiram Cabrera

Phone: 318 3592 2129

GENEBSYS SAS

Software Developer

2017/12/18 – 218/02/18

Backend + Frontend software developer, using frameworks such as Angular 6+, Laravel under the PHP language, JavaScript, CSS3 with SASS, HTML5, TypeScript, developing medium and high complexity logical functions with connection to MYSQL database. In addition to the various developments, there are also code and database level migrations, CMS creation from scratch for applications.

Brands worked: Samsung.

Boss: Blanca Segura

Phone: 314 314 9879

Uvée Diseño y Publicidad SAS

Software Developer

2015/03/19 – 2017/12/14

Backend PHP and JAVA software developer, using various frameworks, developing medium and high complexity logical functions with a database connection such as MYSQL, modifying it through the ORM mapping offered by the frameworks.

Frontend developer with skills to structure (layout) sites from 0, with a base design applying Responsive Web Design, CSS3 with SASS, HTML5, JS.

Brands worked: Red Bull, Jägermeister, Makro Colombia, CasaLuker, National Association of Pig Farmers, San Blas Adventures, Instituto de Ortopedia Infantil Roosevelt, The North Face, Steve Madden, Nine West, Superga, Terpel.

Boss: Manuel Antonio Mora Sandoval

Phone: 318 8565979

Innova-ion SAS

Software Developer

2014/01/01 – 2014/12/28

JAVA software developer of different projects undertaken by the company such as the web administration of the ShopInMall app, among others.

Development of restfull software and services under the PHP language, with MYSQL database management, using various frameworks such as cakephp, various libraries, style sheet management and JavaScript.

Software development under the Java language, using the JAVA JPA API and managing the database with SQLLite.

Applied Technologies

• Java

• Swing

• JPA.

• PHP
